Foreword

1	Design concepts for durable post-tensioning tendons	1
1.0	Introduction	1
1.1	Post-tensioning tendon definitions and principles (1.1.1 Post-tensioning and Pre-tensioning – 1.1.2 Internal and external tendons – 1.1.3 Bonded and unbonded tendons – 1.1.4 Specific tendon categories and innovative post-tensioning systems – 1.1.5 Durability considerations)	1
1.2	Deterioration mechanisms (1.2.1 Experiences and observations – 1.2.2 Fundamentals – 1.2.3 Scenario of deterioration)	4
1.3	Design strategies (1.3.1 Durability design principles – 1.3.2 Specifications – 1.3.3 Concrete quality and cover – 1.3.4 Waterproofing systems and surface protection systems – 1.3.5 Drainage system – 1.3.6 Expansion joints – 1.3.7 Cracking – 1.3.8 Construction joints – 1.3.9 Segment joints – 1.3.10 Tendon layout – 1.3.11 Access for inspection and maintenance)	7
1.4	Tendon protection strategies (1.4.1 General principles – 1.4.2 Protection levels of tendons – 1.4.3 Aggressivity of environment and exposure – 1.4.4 Protection layers provided by the structure – 1.4.5 Protection levels examples – 1.4.6 Guidance for further developments)	11
2	Materials and construction	19
2.1	Requirements for materials (2.1.1 Prestressing steel and FRP materials – 2.1.2 Anchorages – 2.1.3 Ducts – 2.1.4 Accessories – 2.1.5 Corrosion protection materials)	19
2.2	Requirements for construction (2.2.1 Packaging – transportation – storage – handling – 2.2.2 Installation equipment – 2.2.3 Installation of tendons – 2.2.4 Stressing of tendons – 2.2.5 Injection/Filling of tendons – 2.2.6 Inspection of tendons)	40
2.3	Certification of suppliers and installers	47
3	Maintenance, assessment and rehabilitation	49
3.1	Introduction	49
3.2	Maintenance	50
3.3	Assessment (3.3.1 General – 3.3.2 Tendons of category PL1 and PL2 – 3.3.3 Tendons of category PL3)	51
3.4	Rehabilitation	58
	References	58
Appendix	Maintenance, assessment and rehabilitation of post-tensioning tendons in existing structures	61
	Appendix references	71
