<b>Preface</b>	<b>iv</b>
<b>0 Introduction</b>	<b>1</b>
<b>1 General</b>	<b>5</b>
1.1 Scope	5
1.2 Associated codes	5
1.3 Assumptions	5
1.4 Definitions	6
1.5 Symbols	10
<b>2 Basis of design</b>	<b>12</b>
2.1 Requirements	12
2.2 Principles of limit state design	14
2.3 Basic variables	14
2.4 Verification	16
<b>3 Verification of Service Life Design</b>	<b>20</b>
3.1 Carbonation induced corrosion – uncracked concrete	20
3.2 Chloride induced corrosion – uncracked concrete	23
3.3 Influence of cracks upon reinforcement corrosion	24
3.4 Risk of depassivation with respect to pre-stressed steel	25
3.5 Freeze/thaw attack – without de-icing agents	25
3.6 Freeze/thaw attack – with de-icing agents	27
<b>4 Execution and its quality management</b>	<b>29</b>
4.1 General	29
4.2 Project specification	29
4.3 Quality management	30
4.4 Materials	31
4.5 Geometry	32
<b>5 Maintenance and condition control</b>	<b>33</b>
5.1 General	33
5.2 Maintenance	33
5.3 Condition control during service life	33
5.4 Action in the event of non-conformity	34
Annex A (informative)	
<b>Management of reliability for Service Life Design of concrete structures</b>	<b>36</b>
Annex B (informative)	
<b>Full probabilistic design methods</b>	<b>44</b>
Annex C (informative)	
<b>Partial factor methods</b>	<b>83</b>
Annex R (informative)	
<b>Reliability management: from SLS to ULS</b>	<b>90</b>
<b>References</b>	<b>109</b>
