

Contents

1	Definitions and classification	1
1.1	Range of applicability	1
1.2	Classification by strength - concrete grades	1
2	Density	1
3	Strength	3
3.1	Range of applicability	3
3.2	Compressive strength	3
	(3.2.1 Parameters affecting compressive strength – 3.2.2 Determination of the compressive strength)	
3.3	Tensile strength and fracture properties	5
	(3.3.1 Tensile strength – 3.3.2 Fracture energy)	
3.4	Strength under multiaxial states of stress	17
	(3.4.1 Basic principles – 3.4.2 Biaxial stress combinations – 3.4.3 Triaxial compression and tension – 3.4.4 Partial area loading)	
4	Stress and strain	23
4.1	Range of application	23
4.2	Modulus of elasticity	23
4.3	Poisson's ratio	25
4.4	Stress-strain relations for short-term loading	25
	(4.4.1 Compression – 4.4.2 Tension – 4.4.3 Multiaxial states of stress)	
4.5	Shear friction behaviour in cracks	33
	(4.5.1 Introduction – 4.5.2 The shear friction principle – 4.5.3 Shear friction across cracks in HPC – 4.5.4 Ultimate shear friction capacity of cracks in reinforced HPC)	
4.6	Rotation and bending capacity	39
5	Stress and strain rate effects – impact	43
5.1	Range of applicability	43
5.2	Compressive strength	43
5.3	Tensile strength and fracture properties	45
	(5.3.1 Tensile strength – 5.3.2 Fracture energy)	
5.4	Modulus of elasticity	46
5.5	Stress-strain relation	47
6	Time effects	49
6.1	Development of strength with time	49
	(6.1.1 Development of the compressive strength – 6.1.2 Development of the tensile strength)	
6.2	Strength under sustained loads	55
	(6.2.1 Long-term compression tests – 6.2.2 Long-term tensile tests – 6.2.3 Damage mechanisms and failure under sustained loads – 6.2.4 Calculation methods)	
6.3	Development of the modulus of elasticity with time	68
6.4	Creep and shrinkage	69
	(6.4.1 Introduction – 6.4.2 Definitions and general considerations – 6.4.3 Shrinkage – 6.4.4 Creep – 6.4.5 Closing considerations)	

7	Fatigue	87
7.1	Introduction	87
7.2	Experimental investigations	87
	(7.2.1 Plain concrete in compression – 7.2.2 Plain concrete in tension – 7.2.3 Fracture mechanical fatigue tests – 7.2.4 Conclusions from experimental tests)	
7.3	Phenomenological behaviour of HPC under fatigue loading	94
7.4	Modelling the fatigue behaviour of HPC	96
	(7.4.1 Models for compressive fatigue behaviour – 7.4.2 Models for tensile fatigue behaviour)	
7.5	Constitutive relations and fatigue treatment in codes	98
7.6	Conclusions	101
7.7	Acknowledgment	101
8	Temperature effects	103
8.1	Range of application	103
8.2	Maturity	103
8.3	Thermal expansion	105
8.4	Mechanical properties	105
	(8.4.1 Compressive strength – 8.4.2 Tensile strength and modulus of elasticity)	
9	Transport of water, vapour and chloride in hardened concrete	111
9.1	Introduction	111
9.2	Parameters affecting water, vapour and chloride transport in HPC	111
9.3	Constitutive laws for transport of water, vapour and chloride	113
9.4	Conclusions	114
